Education

Kristu Jayanti University, Bengaluru, India 2023 - 2026 (Expected)
Bachelor of Computer Applications with Cloud Computing — CGPA: 7.31(Cumulated till 4th sem)
Relevant Courses: OOPS, Operating Systems, DSA, DBMS, Computer Networks, IOT, Edge, Devops, Cloud Computing

Skills

Languages : Python, SQL, Bash
Frameworks : React JS, NodeJs, Django
Tools : Git, GitHub, Docker, Kubernetes, Jenkins, Postman, Prometheus, Grafana, Node Exporter, Nginx, SSH, UFW, Cron Jobs,LVM, NFS Antigravity, Chatgpt
Databases : MongoDB, MySQL
Platforms : Linux, Windows, Android Studio, VS Code, Ubuntu, Jupyter Notebook, Amazon Web Services (EC2, IAM, Auto Scaling, Load Balancer)

Experience

Centre for Developing and Imaging Technology (C-DIT), Linux Infrastructure Intern (On-site) May 2025 - Jun 2025 | *Trivandrum, India*

- Learned and implemented server backup strategies using shell scripting on Linux-based systems.
- Gained hands-on experience in managing logs, monitoring disk usage, and automating system tasks.
- Connected and managed remote Ubuntu VMs via SSH for scripting and maintenance operations.
- Practiced Linux file system navigation, cron job setup, and scheduled task automation.

F13 Technologies, AWS Cloud Intern (Remote) Nov 2024 - Feb 2025 | Delhi, *India*

- Conducted market research to identify best practices and emerging trends in cloud technologies.
- Performed a case study on Zerodha's migration to AWS.
- Assisted in implementing AWS services including EC2, IAM, and networking.

Pleasant Biz Solutions LLP, Business Operations Analyst (On-Site) Mar 2024 - Nov 2024 | Bengaluru, *India*

- Created 15+ professional PowerPoint reports for market studies, including competition analysis and business strategy presentations.
- Managed monthly accounting operations in Excel and Tally for 5–6 active clients, maintaining accuracy in financial data and ledgers.
- Prepared and verified invoices related to student mess fees, hostel admissions, and exits, ensuring transparent and timely client billing.

Kristu Jayanti Software Development Centre, Backend Developer Intern Jun 2023 – Jul 2023 | Bengaluru, *India*

- Collaborated with front-end developers to integrate user-facing elements into web applications.
- Implemented database management solutions to improve data storage and retrieval efficiency.
- Developed a login and registration system for a Lost and Found webpage, including user authentication, password recovery with email verification, and secure user registration.

Projects

Linux Multi-Web Server Infrastructure with Monitoring

- Built a secure two-VM server infrastructure that improved system reliability and ensured business continuity through automated database and system backups.
- Enhanced system observability by integrating Prometheus and Grafana dashboards, enabling real-time visualization of CPU, memory, and disk usage.
- Strengthened security posture by configuring firewall rules, custom SSH ports, and restricted database privileges, reducing vulnerability risks.

EC2 Deployment with Auto Scaling and Load Balancer

- Deployed a web application on AWS EC2 and used a Load Balancer to distribute traffic.
- Ensured scalability and uptime with auto-scaling and distributed instances across availability zones.
- Managed access control using IAM roles and security groups.

CI/CD Pipeline Automation | Jenkins

- Deployed Jenkins in a containerized environment and configured a declarative Jenkins pipeline.
- Integrated GitHub SCM to automate end-to-end Build → Test → Deploy workflow.
- Implemented version-controlled Jenkinsfile for pipeline reproducibility.
- Tech Stack: Jenkins, Docker, GitHub, CI/CD

SoulLink — One-to-One Real-Time Video & Chat Application (Web Link, Code Link)

- Built a peer-to-peer WebRTC video calling system with real-time chat using Socket.io.
- Implemented seamless Call ↔ Chat switching with persistent session architecture.
- Integrated TURN/STUN servers for reliable connectivity across NAT-restricted networks.
- Developed session-based file sharing and handled ephemeral backend storage constraints.
- Deployed production-ready frontend (Vercel) and backend (Render) with secure HTTPS + CORS configuration.
- Tech stack: React (Vite), Node.js, Express, WebRTC, Socket.io, Tailwind CSS, TURN/STUN, Vercel, Render

Built completely from scratch using Antigravity and ChatGPT to explore system-level architecture and real-time communication in depth.

Volunteering and Achievements

- Event Head | Cloud Odyssey (SynchroTech) – Led planning, coordination, and end-to-end execution of the cloud-focused event.
- Participated in a National-Level Hackathon, solving real-world technical problems in a collaborative team environment.
- Volunteered with Karnataka Civil Defence Corps (KCDC), conducting literacy sessions for government school students and assisting in crowd management to ensure public safety during events.
